

4. A number of elements are available in earth's crust but most abundant elements are _____.

- (i) Al and Fe
- (ii) Al and Cu
- (iii) Fe and Cu
- (iv) Cu and Ag

Ans. (a) Among a number of elements which are available in earth crust, the most abundant elements are aluminium and iron. Aluminium is third most abundant element in earth crust. *i.e.*, 8.3% by weight while iron present in earth crust with 4.2% by weight. Copper and silver are also found in earth crust but their abundance percentage is low.
