

Question 2: The average speed of some vehicles is shown below, Represent it through a bar graph.

Name of Vehicle	Cycle	Scooter	Bus	Car	Train
Average Speed (In km/hr)	25	42	60	80	65

Solution:

The average speed mentioned in the table is the frequency that decides the length of each bar graph, therefore, if the graph is vertical, the Average speed will be shown on the y-axis and the types of vehicles will be shown on the x-axis.
