

Lecture-4

Definite integration.

Tips and Tricks to learn from us.

Tip: in JEE you are not going to see any diagram for most of definite integration questions.

So, once it strike you that this is definite integration area bounded by curve question.

Immediately convert it to a pictorial problem of finding area where diagram is given to you.

then it will easy to visualise that which function have to subtract from which one. and what limits have to take for integration.
