

Tips and Tricks (Stats)

- 1) Since Jee is an objective exam(mainly), you can eliminate the obvious wrong options beforehand.
- 2) Mean, Median, Mode, Standard Deviation are all central values and hence lie in between the extremums of the data.
- 3) The median of Grouped data (continuous distribution) lies between the median class's lower and upper limits.
- 4) To solve mean deviation problems faster, I will suggest making charts of all the different values, as done in examples in the lecture.
- 5) As mean deviation can be about any of the central values, calculate these central values correctly.
