

17. Optical rotations of some compounds along with their structures are given below. Which of them have D configuration.

- (i) I, II, III  
 (ii) II, III  
 (iii) I, II  
 (iv) III

Ans. (i)

**Explanation:** All those compounds which can be chemically correlated to (+) isomer of glyceraldehyde are said to have D-configuration whereas those which can be correlated to (-) isomer of glyceraldehyde are said to have L-configuration.
