

Example-1

Show that,

$$\Delta = \begin{vmatrix} 1 & bc & a(b+c) \\ 1 & ca & b(c+a) \\ 1 & ab & c(a+b) \end{vmatrix} = 0$$

Hint: Use property 9 on column 3. Change C_3 as sum of C_3 and C_2 .

Example-2

Show that,

$$\Delta = \begin{vmatrix} 1 & a & bc \\ 1 & b & ca \\ 1 & c & ab \end{vmatrix} = (a-b)(b-c)(c-a)$$

Hint: Use property 9 repeatedly on appropriate rows.

Example-3

This question is based on the concept of triangle area. Lots of question have been asked from this concept in JEE Mains exam over the years. Basic concept is given as,

If $A(x_1, y_1)$, $B(x_2, y_2)$ and $C(x_3, y_3)$ are the vertices of a triangle

then its area is:

Area of
$$\triangle$$
 ABC = $\frac{1}{2}\begin{vmatrix} x_1 & y_1 & 1 \\ x_2 & y_2 & 1 \\ x_3 & y_3 & 1 \end{vmatrix}$

OR

Area of
$$\triangle$$
 ABC = $\frac{1}{2} \left| x_1(y_2 - y_3) + x_2(y_3 - y_1) + x_3(y_1 - y_2) \right|$

Example-4 — JEE Mains 2014

65. If
$$\alpha$$
, $\beta \neq 0$, and $f(n) = \alpha^n + \beta^n$ and

$$\begin{vmatrix} 3 & 1+f(1) & 1+f(2) \\ 1+f(1) & 1+f(2) & 1+f(3) \\ 1+f(2) & 1+f(3) & 1+f(4) \end{vmatrix}$$

=
$$K(1 - \alpha)^2 (1 - \beta)^2 (\alpha - \beta)^2$$
, then K is equal to

$$(1)$$
 1

$$(2) -1$$

(4)
$$\frac{1}{\alpha\beta}$$

Answer (1)

Sol.
$$\begin{vmatrix} 1+1+1 & 1+\alpha+\beta & 1+\alpha^2+\beta^2 \\ 1+\alpha+\beta & 1+\alpha^2+\beta^2 & 1+\alpha^3+\beta^3 \\ 1+\alpha^2+\beta^2 & 1+\alpha^3+\beta^3 & 1+\alpha^4+\beta^4 \end{vmatrix}$$
$$= \begin{vmatrix} 1 & 1 & 1 \\ \alpha & \beta & 1 \\ \alpha^2 & \beta^2 & 1 \end{vmatrix} \times \begin{vmatrix} 1 & \alpha & \alpha^2 \\ 1 & \beta & \beta^2 \\ 1 & 1 & 1 \end{vmatrix}$$
$$= [(1-\alpha)(1-\beta)(1-\beta)]^2$$
So, $k=1$
