

Tips and Tricks

→ Always read the question carefully, because the inequalities problems are very easy and at the same time easy to commit mistakes.

→ If the sign are $-ve$, then if you multiply with $-ve$ sign, the less than symbol transforms to greater than symbol & vice versa.

→ Always remember to try to solve the problems by graph method. It enables to know whether the roots are exist or not. Then you can do the rest of the problem very easily.

→ Some times substituting the values and solving the problems might make the problem very easier to solve. Always try this.

→ Remembering the important formulas might be very useful while solving inequalities. //
