

#TIPS & TRICKS

- First read the given problem carefully & think the easiest way to solve the problem.
- Solving the equations in terms of sum of roots and products of is easy in many cases. So always think in this perspective to solve a problem whenever there is a chance.
- While solving the previous year JEE problem, we have seen that, simply finding the eqⁿ of the given root solved the problem easily. There are so many ways to solve it, but solving by using sum & product of roots is easy.
- Also, read some of the important formulas and they might be helpful to solve the problems easily.
- If eqⁿ $\neq 0$, then $D < 0$, this relation is also useful. Also, always think of graph for easily finding roots. //
