

Tips and tricks to learn from IITians.

* Groups are the basic blocks for Inorganic chemistry, In that group 1 and 2 comes first, so understand them more, As the physical and chemical properties down the group remains same, except for some cases.

* You can expect 1 or none questions from it, But the thing is, if you understand this topic, you can solve in fraction of seconds, Moreover don't lose out focus or interest from it, They will help you a lot in writing chemical equations.

* Don't just By-heart the orders (reactivity) or any other equations, Understand them, why are they happening so?, what's the reason behind it, Once you get the logic, None can stop you, You can rule Inorganic.

P.S.: Practice the orders, series, equations n number of time, or else you won't remember.
