

**QUESTION 7 :**

1 mole of equimolar mixture  
of  $\text{Fe}_2(\text{C}_2\text{O}_4)_3$  and  $\text{FeC}_2\text{O}_4$  requires  $X$  moles of  $\text{KMnO}_4$  in acid medium  
for complete reaction. The value of  $X$  is:

**Answer:** (option 1) 0.9

The reactions are given below:

Equivalents of oxidising agent = equivalents of reducing agent

Total equivalents of  $(\text{Fe}_2(\text{C}_2\text{O}_4)_3 + \text{FeC}_2\text{O}_4)$  = equivalents of  $\text{KMnO}_4$

$$\therefore (0.5 \times 6) + (0.5 \times 3) = (x \times 5)$$

Moles of  $\text{KMnO}_4 = x = 0.9$ .
