

- Consistent practice is a must to excel in this topic.
- Various results and formulae should be on fingertips.
- While attempting a question on vectors, students are advised to visualize the concept and draw a diagram for the same so that chances of committing mistakes are minimized.
- The concepts of dot product and cross product including their nature must be very clear. For e.g., Suppose we have three non-zero vectors, then if their scalar triple product is zero, then the three vectors are coplanar.
- Practice sufficient number of previous year papers to get acquainted with the kind of questions asked in exam.
