

5. The domain of the definition of the function

$$f(x) = \frac{1}{4-x^2} + \log_{10}(x^3 - x) \text{ is:} \quad [\text{April. 09, 2019 (II)}]$$

- (a) $(-1, 0) \cup (1, 2) \cup (3, \infty)$
- (b) $(-2, -1) \cup (-1, 0) \cup (2, \infty)$
- (c) $(-1, 0) \cup (1, 2) \cup (2, \infty)$
- (d) $(1, 2) \cup (2, \infty)$

5. (c) To determine domain, denominator $\neq 0$ and $x^3 - x > 0$
i.e., $4 - x^2 \neq 0 \Rightarrow x \neq \pm 2 \quad \dots(1)$
and $x(x-1)(x+1) > 0$

$$x \in (-1, 0) \cup (1, \infty) \quad \dots(2)$$

Hence domain is intersection of (1) & (2).

$$\text{i.e., } x \in (-1, 0) \cup (1, 2) \cup (2, \infty)$$
