

Properties of Matrix Multiplication:

→ Try to play around with your own matrices to test their properties, like associativity or commutativity.

Check if you can choose two matrices whose product will be a zero or identity matrix.

This way, you will learn the properties faster.

Row reduced echelon matrix and row elementary operations:

→ Try solving problems and understand each step and the operations used. Solving problems the first few times might be difficult but with practice you will get better at this.
