

Q) Consider the family of all circles whose centers lie on the straight line $y=x$. If this family of circle is represented by the differential equation $P\underline{y}'' + Q\underline{y}' + I = 0$, where P, Q are functions of x, y and \underline{y}' (here $\underline{y}' = \frac{dy}{dx}$ and $\underline{y}'' = \frac{d^2y}{dx^2}$), then which of the following statements is (are) true?
[Advanced 2015]

- (a) $P = \underline{y} + x$ (b) $P = \underline{y} - x$ (c) $P + Q = 1 - x + \underline{y} + \underline{y}' + (\underline{y}')^2$
(d) $P - Q = x + \underline{y} - \underline{y}' - (\underline{y}')^2$

Solution: (b, c) Let the equation of circle be

$$x^2 + \underline{y}^2 + 2gx + 2gy + c = 0$$

$$\Rightarrow 2x + 2\underline{y}' + 2g + 2g\underline{y}' = 0$$

$$\Rightarrow x + \underline{y}\underline{y}' + g + g\underline{y}' = 0 \quad \text{--- (1)}$$

On differentiating again, we get

$$1 + \underline{y}\underline{y}'' + (\underline{y}')^2 + g\underline{y}'' = 0 \Rightarrow g = -\left[\frac{1 + (\underline{y}')^2 + \underline{y}\underline{y}''}{\underline{y}''}\right]$$

On substituting the value of g in eqn (1), we get

$$x + \underline{y}\underline{y}' - \frac{1 + (\underline{y}')^2 + \underline{y}\underline{y}''}{\underline{y}''} - \left(\frac{1 - (\underline{y}')^2 + \underline{y}\underline{y}''}{\underline{y}''}\right)\underline{y}' = 0$$

$$\Rightarrow \underline{y}\underline{y}'' + \underline{y}\underline{y}'\underline{y}'' - 1 - (\underline{y}')^2 - \underline{y}\underline{y}'' - \underline{y}' - (\underline{y}')^3 - \underline{y}\underline{y}'\underline{y}'' = 0$$

$$\Rightarrow (x - \underline{y})\underline{y}'' - \underline{y}'(1 + \underline{y} + (\underline{y}')^2) = 1$$

$$\Rightarrow (x - \underline{y})\underline{y}'' + [1 + \underline{y}' + (\underline{y}')^2]\underline{y}' + 1 = 0$$

$$\therefore P\underline{y}'' + Q\underline{y}' + I = 0$$

$$P = \underline{y} - x, Q = 1 + \underline{y}' + (\underline{y}')^2$$

$$\text{Hence, } P + Q = 1 - x + \underline{y} + \underline{y}' + (\underline{y}')^2$$
