

**CLASS XII**  
**CHAPTER-13**  
**AMINES**

**IMPORTANT POINTS TO REMEMBER**

- ❖ **Basicity of amines** - The stability of amines and the sequence of basicity of different amines.
- ❖ **Preparation of amines** - Methods of preparations and the reagents used.
- ❖ **Reactions of amines** - The reactions such as alkylation, acylation, halogenation, nitration and sulphonation are important and often questions pertaining to these topics are asked.
- ❖ **Chemical properties of amines** - The different chemical reactions that take place and the conditions required.
- ❖ **Test for amines** - The test for primary, secondary or tertiary amines and compounds and reagents used in these tests.
- ❖ All the **Named reactions** of amines.
