

SOME IMPORTANT TIPS FOR CHEMISTRY CHAPTERS IN GENERAL

- If you are not really good at Chemistry, then you have to spend a lot of time learning and practicing each topic separately.
- Collect the complete syllabus and books to start your preparation.
- Do not rush to complete your syllabus fast, indeed start preparing on beforehand. You will require a lot of time to memorize formulae, scientific concepts and reactions.
- If you get any doubts or need any clarifications, get them as soon as possible from videos, lecturers, peers etc.
- Don't ignore numerical problems. You may find some of the direct questions or some questions that are mixed up with the concepts. If they are direct questions, you can easily score marks.
- Revise at least 2-3 times after completing the preparation.
- Solve chemistry previous question papers and create an exam environment around so that you can improve your time management skills.
