

1. Practice as much questions as possible.
2. Different types of questions should be practiced.
3. Before going for probability understand sets chapter properly as sets concept will be used again and again in various questions.
4. Never forget to practice previous year questions.
5. If you find some questions difficult, give it more time during practice.
6. Also some questions may include concepts from 12th probability so don't bother if some questions include those concepts.
