

1) Match the chemical substance with the type of polymer/type of bond

(A) Cellulose	(1) Natural Polymer
(B) Nylon-6,6	(2) Synthetic Polmer
(C) Protein	(3) Amide linkage
(D) Sucrose	(4) Glycoside linkage

[JEE 2007]

**Answer:**

- (A) 1,4
- (B) 2,3
- (C) 1,3
- (D) 4

**Solution:** Note the structure of each molecule. Proteins are made of peptides, which are in turn made of amino acids. Bonds in peptides are amide linkages.
