

Tips and tricks to learn from IITians.

— Probability → Lecture 6.

- Don't just get into the problem directly, just give it a try twice/thrice before leaving any type, it may be tricky, but once you get over it, you can excel it.
- Also, Don't miss the basic concepts, otherwise you just don't get it.
- Definitions are important, Read them carefully.
- First, Understand the concept clearly, then jump onto problems, solving huge problems is not that important thing.
- Don't forget to revise the previous topics. They all are interconnected, so solve real life problems of probability and have fun.
