

Tips and tricks to learn from IITians

— Differential Equations.

- * The foremost thing in any type of question is to identify how the solution can be obtained i.e. by which method, like by inspection (or) variable separable - - -
- * In this type of topics, understanding a topic is one thing, but I recommend you to solve n-number of problems, so that you get "used-to" to these problems.
- * So, finding a solution for the given D.E is the most important thing than just putting the values for the answer, so, what I mean is that use appropriate method and find the solution and don't do any errors in that.
- * Once you get all the methods, you can do any type of problem, One good thing is that there aren't any sort of tricky problems in this topic!!! - So, plan wisely.
