

Tips and Tricks

1. To be fast in exam one definitely needs to remember derivative of standard and important functions.

- See concepts pdf for nice compilation of such functions and their derivatives.

2. Another very important thing to keep in mind is the rules of differentiation.

- See concepts pdf for nice compilation of important theorems and their derivative results.

3. Practice and Practice these standard formulas and theorems to be able to recall them when required during an exam.

4. I strongly urge that you solve exemplar problems to get the hang of derivatives of standard functions.
