- **Q 3.** Consider a circular current-carrying loop of radius R in the x-y plane with centre at origin. Consider the line intergral  $\Im(L) = \left| \int_{-L}^{L} \mathbf{B} \cdot \mathbf{dl} \right|$  taken along z-axis.
  - a. Show that 3 (L) monotonically increases with L.
  - b. Use an appropriate Amperian loop to show that  $\Im\left(\infty\right)=\mu_{0}I$ , where I is the current in the wire.
  - c. Verify directly the above result.
  - d. Suppose we replace the circular coil by a square coil of sides R carrying the same current I. What can you say about  $\mathfrak{I}(L)$  and  $\mathfrak{I}(\infty)$ ?

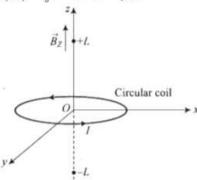

Sol.

 a. Magnetic field due to a circular current-carrying loop lying in the xy- plane acts along z-axis as shown in figure.

$$\Im(L) = \left| \int_{-L}^{L} ec{B} \cdot \overrightarrow{dl} 
ight| = \int_{-L}^{+L} \mathrm{B} dl \mathrm{cos} \, \mathrm{0^{\circ}} = \int_{-L}^{+L} \mathrm{B} \mathrm{dl} = 2 \mathrm{BL}$$

- ... 3 (L) is monotonically increasing function of L.
- b. Now consider an Amperean loop around the circular coil of such a large radius L  $\to \infty$  . since this loop encloses a current I, Now using Ampere's law

$$\mathfrak{I}(\infty)=\oint^{+\infty}ec{B}\cdot\overrightarrow{dl}=\mu_0I$$

c. The magnetic field at the axis (z-axis) of circular coil at a distance z from the centre of a circular coil of radius R carrying current I is

given by 
$$B_z=rac{\mu_0IR^2}{2(z^2+R^2)^{3/2}}$$

Now integrating

$$\int_{-\infty}^{+\infty} B_z dz = \int_{-\infty}^{+\infty} \frac{\mu_0 I R^2}{2(z^2 + R^2)^{3/2}} dz$$

Let  $z = R \tan \theta$  so that  $dz = R \sec^2 \theta d\theta$ 

and 
$$(z^2 + R^2)^{3/2} = (R^2 \tan^2 \theta + R^2)^{3/2}$$

= 
$$R^3 \sec^3 \theta$$
 (as 1 +  $\tan^2 \theta$  =  $\sec^2 \theta$ )

Thus, 
$$\int_{-\infty}^{+\infty}B_zdz=\frac{\mu_0I}{2}\int_{-\pi/2}^{+\pi/2}\frac{R^2(R\sec^2\theta d\theta)}{R^3\sec^3\theta}$$

$$= \frac{\mu_0 I}{2} \int_{-\pi/2}^{+\pi/2} \cos \theta d\theta = \mu_0 I$$

d. As we know (Bz) square < (Bz) circular coil

For the same current, and side of the square equal to radius of the coil

$$\Im(\infty)_{\text{square}} < \Im(\infty)_{\text{circularcoil}}$$

By using the same argument as we done in case (b), it can be shown that

$$\Im(\infty)_{\text{square}} = \Im(\infty)_{\text{circularcoil}} = \mu_0 I$$
