

Question 06. The acceleration versus time graph of a particle moving along a straight line is shown in the figure. Draw the respective velocity-time graph. Given $v = 0$ at $t = 0$.

Fig. 6.33

Solution From $t = 0$ to $t = 2$ s, $a = +2 \text{ m/s}^2$

$$\therefore v = at = 2t$$

or v - t graph is a straight line passing through origin with slope 2 m/s^2 .

At the end of 2 s,

$$v = 2 \times 2 = 4 \text{ m/s}$$

From

$$t = 2 \text{ to } 4 \text{ s, } a = 0.$$

Hence, $v = 4 \text{ m/s}$ will remain constant.

From $t = 4$ to 6 s, $a = -4 \text{ m/s}^2$.

$$\text{Hence, } v = u - at = 4 - 4t$$

$v = 0$ at $t = 1$ s or at 5 s from origin.

(with $t = 0$ at 4 s)

At the end of 6 s (or $t = 2$ s) $v = -4 \text{ m/s}$. Corresponding v - t graph is as shown in Fig. 6.34.
