

QUES 01:-

On a train moving along east with a constant speed v , a boy revolves a bob with string of length ℓ on smooth surface of a train, with equal constant speed v relative to train. Mark the correct option(s).
 (A) Maximum speed of bob is $2v$ in ground frame.

(B) Tension in string connecting bob is $\frac{4mv^2}{\ell}$ at an instant.

(C) Tension in string is $\frac{mv^2}{\ell}$ at all the moments.

(D) Minimum speed of bob is zero in ground frame.

Soln: \Rightarrow Train is moving with velocity v and is inertial frame.
 in the frame of train; no pseudo force will act on the Bob.

Option A, D]

at this position;

$$v_{\text{Bob/train}} = +v$$

$$v_{\text{train/ground}} = +v$$

$$v_{\text{Bob/ground}} = 2v$$

Similarly $v_{\text{min}} = 0$

Option B]

Bob is in circular motion in the frame of train; so the Eqn of circular motion will be used in the frame of train.

$$\frac{mv^2}{r} = T$$

Option C] always (v constant in circular motion)

\hookrightarrow here it is in train frame.
